Art Unit: 1711

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Jung (WO97/17388).

Jung discloses polyisocyanate compositions and the method of binding lignocellulose material with these compositions. These compositions comprise complexes of titanium with acetoacetate ester (see structure-top page 3). In line 21, page 3, he prefers acetoacetate esters made from C1-C3 alcohols, and in the examples (see example 9), he shows mole ratios of acetoacetate to titanium of 3.4/1. He prepares the metal complexes by reacting metal alkoxides with acetoacetates and removes the alcohol (middle – page 2). At the top of page 4, he teaches using 0.5-4 wt. % of the metal complex based on the weight of the polyisocyanate. In the examples, he uses polymeric diphenylmethane diisocyanate and he shows using methyloleate diluent (example 3) in the amount of the claims. On page 13, lines 33-39 he shows the same conditions of temperature and pressure for pressing the particle boards, and on page 14, lines 34-36, he discloses including a formaldehyde resin with the polyisocyanate composition.
